

Updating an Existing Local Repository from Remote

1. Fetch Changes from Remote Repository:

- `git fetch`
 - Example: `git fetch origin`
 - Description: Downloads objects and refs from another repository.

2. Merge Changes into Local Branch:

- `git merge`
 - Example: `git merge origin/master`
 - Description: Integrates changes fetched from the remote repository into the current branch.

3. Pull Changes from Remote Repository:

- `git pull`
 - Example: `git pull origin master`
 - Description: Fetches and merges changes from the remote branch to the local branch.
